Program Structure and Curriculum

Bates economics offers a comprehensive curriculum designed to equip students with a solid foundation in economic theory and practice. The program emphasizes critical thinking, quantitative analysis, and the application of economic principles to real-world scenarios. Students engage with both microeconomics and macroeconomics, exploring topics ranging from market behavior to national economic policies.

Core Courses

The core curriculum of Bates economics includes essential courses that every economics major must complete. These courses provide a solid grounding in key economic concepts and analytical techniques. Typical core courses include:

- Introduction to Microeconomics

- Introduction to Macroeconomics
- Statistical Methods for Economics
- Econometrics
- International Economics

Each of these courses is designed to build upon the last, ensuring that students develop a comprehensive understanding of both theoretical and applied economics. The emphasis on statistical methods and econometrics prepares students to analyze data effectively, a crucial skill in today's data-driven economy.

Electives and Specializations

In addition to the core courses, Bates economics allows students to choose from a range of electives that cater to their interests and career goals. These electives often cover specialized topics such as:

- Behavioral Economics
- Environmental Economics
- Labor Economics
- Development Economics
- Financial Economics

This flexibility in course selection enables students to tailor their education to align with their personal and professional aspirations, making the program more relevant to their future career paths.
