Course Structure and Offerings

The course structure of UCLA's economics program is designed to provide a robust academic foundation while allowing students to explore various areas of interest within the field. The program typically includes a mix of core courses, electives, and advanced seminars. Students engage with both theoretical frameworks and practical applications of economic principles, ensuring a well-rounded educational experience.

Core Courses

Core courses are essential for all economics majors and typically cover fundamental concepts in microeconomics, macroeconomics, and econometrics. At UCLA, students can expect to encounter the following core courses:

- **Principles of Microeconomics:** This course introduces students to the behavior of individuals

and firms in making decisions regarding resource allocation.

- **Principles of Macroeconomics:** Students learn about the economy as a whole, including topics such as inflation, unemployment, and economic growth.
- **Introduction to Econometrics:** This course teaches students how to apply statistical methods to economic data, a crucial skill for analysis and research.

These core courses lay the groundwork for more specialized topics, enabling students to build their knowledge progressively and apply it in various contexts.

Electives and Advanced Courses

UCLA also offers a wide range of electives that allow students to delve deeper into specific areas of economics. Some notable elective courses include:

- **Behavioral Economics:** This course examines how psychological factors influence economic decision-making.
- **International Economics:** Students explore trade theories, exchange rates, and the global economy.
- **Labor Economics:** This course focuses on the dynamics of labor markets, employment, and wage determination.
- **Development Economics:** Students analyze economic development strategies and policies in low-income countries.

Advanced courses and seminars further enhance students' understanding of economics, often involving research projects and presentations that prepare them for graduate studies or careers in economics.

Specializations within Economics

UCLA Economics provides students with opportunities to specialize in various fields within economics. These specializations allow students to tailor their education to their career goals and interests. Common specializations include:

Financial Economics

Financial economics focuses on the behavior of financial markets and the principles of finance. Students learn about asset pricing, risk management, and the functioning of financial institutions. This specialization is particularly beneficial for those looking to enter the finance sector.

Health Economics

This specialization examines the economic aspects of health and healthcare systems. Students analyze healthcare policies, costs, and the impact of economic factors on public health. Graduates often pursue careers in healthcare consulting, policy analysis, and management.

Environmental Economics

Environmental economics explores the economic impact of environmental policies and the value of natural resources. Students study topics such as sustainability, resource management, and the economics of climate change, preparing them for careers in environmental policy and conservation.
