Each of these rankings employs a unique methodology, focusing on different aspects of university performance.

Thus, understanding how these rankings are constructed is crucial for making informed decisions regarding higher education.

The criteria used to rank economics programs can vary significantly between different ranking organizations. However, there are several common factors that are consistently evaluated. Understanding these criteria can help prospective students appreciate what they should look for in a university's economics program.

- **Graduate Prospects:** This criterion evaluates the employability of graduates, including the percentage of graduates in employment or further study shortly after completing their degrees.
