

SECONDARY MATH 3 MODULE 1

UNDERSTANDING SECONDARY MATH 3 MODULE 1: A COMPREHENSIVE GUIDE

SECONDARY MATH 3 MODULE 1 SERVES AS A PIVOTAL STEPPING STONE IN A STUDENT'S MATHEMATICAL JOURNEY, LAYING THE GROUNDWORK FOR MORE ADVANCED CONCEPTS. THIS FOUNDATIONAL MODULE TYPICALLY DIVES DEEP INTO FUNCTIONS, EXPLORING THEIR PROPERTIES, REPRESENTATIONS, AND TRANSFORMATIONS. WE'LL UNPACK THE CORE IDEAS OF WHAT MAKES A RELATION A FUNCTION, HOW TO ANALYZE THEIR BEHAVIOR THROUGH GRAPHS AND EQUATIONS, AND THE ESSENTIAL TECHNIQUES FOR MANIPULATING THEM. BY THE END OF THIS EXPLORATION, YOU'LL HAVE A ROBUST UNDERSTANDING OF FUNCTION NOTATION, DOMAIN AND RANGE, AND THE VARIOUS WAYS FUNCTIONS CAN BE COMBINED AND ALTERED. THIS GUIDE AIMS TO DEMYSTIFY THESE CONCEPTS, PROVIDING CLEAR EXPLANATIONS AND PRACTICAL INSIGHTS TO ENSURE MASTERY OF SECONDARY MATH 3 MODULE 1.

UNDERSTANDING THE BASICS OF FUNCTIONS

IN THE REALM OF MATHEMATICS, A FUNCTION IS A FUNDAMENTAL CONCEPT THAT DESCRIBES A RELATIONSHIP BETWEEN INPUTS AND OUTPUTS. THINK OF IT LIKE A MACHINE: YOU PUT SOMETHING IN (THE INPUT), AND THE MACHINE GIVES YOU SOMETHING BACK (THE OUTPUT) ACCORDING TO A SPECIFIC RULE. CRUCIALLY, FOR A RELATIONSHIP TO BE CONSIDERED A FUNCTION, EACH INPUT MUST HAVE EXACTLY ONE OUTPUT. THIS ONE-TO-ONE OR MANY-TO-ONE CORRESPONDENCE IS WHAT DISTINGUISHES A FUNCTION FROM A MORE GENERAL RELATION. WE OFTEN USE VARIABLES LIKE ' x ' TO REPRESENT THE INPUT (INDEPENDENT VARIABLE) AND ' y ' TO REPRESENT THE OUTPUT (DEPENDENT VARIABLE), WHERE ' y ' IS A FUNCTION OF ' x '. THIS DISTINCTION IS VITAL AS WE MOVE INTO ANALYZING THE BEHAVIOR AND CHARACTERISTICS OF VARIOUS MATHEMATICAL RELATIONSHIPS.

RELATIONS VS. FUNCTIONS

IT'S IMPORTANT TO DIFFERENTIATE BETWEEN A RELATION AND A FUNCTION. A RELATION IS SIMPLY A SET OF ORDERED PAIRS, WHERE EACH PAIR CONNECTS AN INPUT TO AN OUTPUT. HOWEVER, NOT ALL RELATIONS ADHERE TO THE STRICT RULE OF A FUNCTION. FOR INSTANCE, A RELATION WHERE AN INPUT OF ' 2 ' COULD LEAD TO BOTH AN OUTPUT OF ' 4 ' AND AN OUTPUT OF ' -4 ' IS NOT A FUNCTION, AS THE INPUT ' 2 ' HAS MULTIPLE OUTPUTS. THIS IS WHERE THE VERTICAL LINE TEST COMES INTO PLAY WHEN WE LOOK AT GRAPHS; IF ANY VERTICAL LINE INTERSECTS THE GRAPH AT MORE THAN ONE POINT, THE GRAPH DOES NOT REPRESENT A FUNCTION. UNDERSTANDING THIS CORE DIFFERENCE IS THE FIRST STEP IN MASTERING SECONDARY MATH 3 MODULE 1.

TYPES OF FUNCTIONS

SECONDARY MATH 3 MODULE 1 OFTEN INTRODUCES STUDENTS TO A VARIETY OF FUNCTION TYPES. THESE CAN RANGE FROM SIMPLE LINEAR FUNCTIONS, WHERE THE GRAPH IS A STRAIGHT LINE, TO MORE COMPLEX QUADRATIC FUNCTIONS, WHICH FORM PARABOLAS. EXPONENTIAL AND LOGARITHMIC FUNCTIONS ALSO MAKE THEIR APPEARANCE, DESCRIBING GROWTH AND DECAY PHENOMENA, OR INVERSE RELATIONSHIPS, RESPECTIVELY. EACH TYPE OF FUNCTION HAS UNIQUE PROPERTIES AND BEHAVIORS THAT WE LEARN TO IDENTIFY AND WORK WITH. RECOGNIZING THESE DIFFERENT FORMS IS KEY TO APPLYING THE CORRECT MATHEMATICAL TOOLS AND UNDERSTANDING THE REAL-WORLD APPLICATIONS THEY MODEL.

FUNCTION NOTATION AND EVALUATION

FUNCTION NOTATION IS A CONCISE AND POWERFUL WAY TO REPRESENT FUNCTIONS AND THEIR VALUES. INSTEAD OF WRITING " y IS A FUNCTION OF x ," WE USE THE NOTATION $f(x)$, WHICH READS AS " f OF x ." THIS NOTATION NOT ONLY TELLS US THAT ' f ' IS THE NAME OF THE FUNCTION AND ' x ' IS THE INPUT VARIABLE, BUT IT ALSO DIRECTLY REPRESENTS THE OUTPUT OF THE FUNCTION FOR A GIVEN INPUT ' x '. MASTERING THIS NOTATION IS ESSENTIAL FOR UNDERSTANDING HOW TO WORK WITH

FUNCTIONS ALGEBRAICALLY AND HOW TO CALCULATE SPECIFIC OUTPUT VALUES.

EVALUATING FUNCTIONS

EVALUATING A FUNCTION MEANS FINDING THE OUTPUT VALUE FOR A SPECIFIC INPUT VALUE. IF WE HAVE A FUNCTION, SAY $g(x) = 3x + 2$, AND WE WANT TO FIND $g(5)$, WE SIMPLY SUBSTITUTE '5' FOR EVERY 'x' IN THE FUNCTION'S DEFINITION. SO, $g(5) = 3(5) + 2 = 15 + 2 = 17$. THIS PROCESS IS STRAIGHTFORWARD BUT REQUIRES CAREFUL ATTENTION TO DETAIL, ESPECIALLY WHEN DEALING WITH MORE COMPLEX FUNCTIONS INVOLVING EXPONENTS OR MULTIPLE TERMS. PRACTICE IS KEY TO BECOMING PROFICIENT IN EVALUATING FUNCTIONS WITH VARIOUS INPUTS.

WORKING WITH DIFFERENT INPUTS

SECONDARY MATH 3 MODULE 1 ALSO EMPHASIZES WORKING WITH DIFFERENT TYPES OF INPUTS BEYOND SIMPLE NUMBERS. THIS CAN INCLUDE EVALUATING FUNCTIONS WITH VARIABLES, EXPRESSIONS, OR EVEN OTHER FUNCTIONS. FOR EXAMPLE, IF WE HAVE $h(x) = x^2$ AND WE NEED TO FIND $h(a+1)$, WE SUBSTITUTE $(a+1)$ FOR EVERY 'x', RESULTING IN $h(a+1) = (a+1)^2$. THIS SKILL IS FUNDAMENTAL FOR UNDERSTANDING FUNCTION COMPOSITION AND FOR ADVANCED ALGEBRAIC MANIPULATIONS.

DOMAIN AND RANGE EXPLORATION

THE DOMAIN AND RANGE ARE TWO CRITICAL CHARACTERISTICS THAT DESCRIBE THE SET OF ALL POSSIBLE INPUT AND OUTPUT VALUES FOR A FUNCTION, RESPECTIVELY. UNDERSTANDING THESE SETS HELPS US DEFINE THE BOUNDARIES WITHIN WHICH A FUNCTION OPERATES AND PROVIDES VALUABLE INSIGHTS INTO ITS BEHAVIOR.

DEFINING THE DOMAIN

THE DOMAIN OF A FUNCTION IS THE SET OF ALL POSSIBLE INPUT VALUES (x-VALUES) FOR WHICH THE FUNCTION IS DEFINED. FOR MANY SIMPLE FUNCTIONS, LIKE LINEAR FUNCTIONS, THE DOMAIN IS ALL REAL NUMBERS. HOWEVER, CERTAIN FUNCTIONS HAVE RESTRICTIONS. FOR EXAMPLE, FUNCTIONS WITH DENOMINATORS CANNOT HAVE INPUTS THAT MAKE THE DENOMINATOR ZERO, AND FUNCTIONS INVOLVING SQUARE ROOTS CANNOT HAVE INPUTS THAT RESULT IN TAKING THE SQUARE ROOT OF A NEGATIVE NUMBER (IN THE CONTEXT OF REAL NUMBERS). IDENTIFYING THESE RESTRICTIONS IS A KEY SKILL IN SECONDARY MATH 3 MODULE 1.

DETERMINING THE RANGE

THE RANGE OF A FUNCTION IS THE SET OF ALL POSSIBLE OUTPUT VALUES (y-VALUES) THAT THE FUNCTION CAN PRODUCE. SIMILAR TO THE DOMAIN, THE RANGE CAN BE ALL REAL NUMBERS OR IT CAN BE RESTRICTED. FOR INSTANCE, A QUADRATIC FUNCTION THAT OPENS UPWARDS WILL HAVE A MINIMUM OUTPUT VALUE, MEANING ITS RANGE WILL START FROM THAT MINIMUM AND EXTEND TO POSITIVE INFINITY. GRAPHING THE FUNCTION IS OFTEN A HELPFUL VISUAL TOOL FOR DETERMINING THE RANGE.

INTERVAL NOTATION AND SET-BUILDER NOTATION

WHEN EXPRESSING THE DOMAIN AND RANGE, MATHEMATICIANS OFTEN USE SPECIFIC NOTATIONS TO CLEARLY DEFINE THESE SETS. INTERVAL NOTATION USES PARENTHESES AND BRACKETS TO INDICATE THE INCLUSION OR EXCLUSION OF ENDPOINTS, WHILE SET-BUILDER NOTATION USES A MORE FORMAL DESCRIPTION OF THE ELEMENTS WITHIN THE SET. PROFICIENCY IN BOTH THESE NOTATIONS IS DEVELOPED THROUGHOUT SECONDARY MATH 3 MODULE 1.

GRAPHING FUNCTIONS AND THEIR PROPERTIES

VISUALIZING FUNCTIONS THROUGH GRAPHS IS AN INCREDIBLY POWERFUL WAY TO UNDERSTAND THEIR BEHAVIOR, IDENTIFY KEY FEATURES, AND ANALYZE THEIR RELATIONSHIPS. GRAPHS PROVIDE AN INTUITIVE REPRESENTATION OF HOW INPUTS TRANSLATE TO OUTPUTS AND REVEAL PATTERNS THAT MIGHT NOT BE IMMEDIATELY OBVIOUS FROM ALGEBRAIC EXPRESSIONS ALONE.

THE CARTESIAN COORDINATE SYSTEM

WE UTILIZE THE CARTESIAN COORDINATE SYSTEM, WITH ITS x-AXIS AND y-AXIS, TO PLOT POINTS AND REPRESENT FUNCTIONS GRAPHICALLY. EACH POINT ON THE GRAPH CORRESPONDS TO AN ORDERED PAIR (x, y) , WHERE 'x' IS THE INPUT AND 'y' IS THE OUTPUT OF THE FUNCTION. BY PLOTTING SEVERAL POINTS GENERATED FROM A FUNCTION'S EQUATION, WE CAN SKETCH ITS CURVE AND GAIN A COMPREHENSIVE UNDERSTANDING OF ITS SHAPE.

ANALYZING GRAPHICAL FEATURES

ONCE A FUNCTION IS GRAPHED, WE CAN ANALYZE ITS VARIOUS FEATURES. THIS INCLUDES IDENTIFYING:

INTERCEPTS: WHERE THE GRAPH CROSSES THE X-AXIS (X-INTERCEPTS OR ROOTS) AND THE Y-AXIS (Y-INTERCEPT).

SYMMETRY: WHETHER THE GRAPH IS SYMMETRIC ABOUT THE Y-AXIS (EVEN FUNCTION) OR THE ORIGIN (ODD FUNCTION).

END BEHAVIOR: WHAT HAPPENS TO THE Y-VALUES AS THE X-VALUES APPROACH POSITIVE OR NEGATIVE INFINITY.

TURNING POINTS: PEAKS AND VALLEYS IN THE GRAPH, WHICH ARE IMPORTANT FOR UNDERSTANDING MAXIMUM AND MINIMUM VALUES.

THESE GRAPHICAL FEATURES PROVIDE CRUCIAL INFORMATION ABOUT THE FUNCTION'S CHARACTERISTICS AND ARE A SIGNIFICANT FOCUS IN SECONDARY MATH 3 MODULE 1.

THE VERTICAL LINE TEST

AS MENTIONED EARLIER, THE VERTICAL LINE TEST IS A QUICK AND EASY METHOD TO DETERMINE IF A GRAPH REPRESENTS A FUNCTION. IF ANY VERTICAL LINE DRAWN ON THE GRAPH INTERSECTS THE CURVE AT MORE THAN ONE POINT, THEN THE GRAPH DOES NOT PASS THE TEST AND THEREFORE DOES NOT REPRESENT A FUNCTION. THIS IS BECAUSE A FUNCTION, BY DEFINITION, CAN ONLY HAVE ONE OUTPUT FOR EACH INPUT.

TRANSFORMATIONS OF FUNCTIONS

TRANSFORMATIONS OF FUNCTIONS ALLOW US TO MANIPULATE THE GRAPHS OF KNOWN PARENT FUNCTIONS TO CREATE NEW GRAPHS. THESE TRANSFORMATIONS ARE BASED ON SIMPLE SHIFTS, STRETCHES, COMPRESSIONS, AND REFLECTIONS, AND UNDERSTANDING THEM ENABLES US TO PREDICT THE SHAPE AND POSITION OF TRANSFORMED FUNCTIONS WITHOUT HAVING TO PLOT EVERY SINGLE POINT.

TRANSLATIONS (SHIFTS)

TRANSLATIONS INVOLVE MOVING A GRAPH HORIZONTALLY OR VERTICALLY. A HORIZONTAL TRANSLATION OCCURS WHEN WE ADD OR SUBTRACT A CONSTANT FROM THE INPUT VARIABLE (E.G., $f(x - c)$ SHIFTS THE GRAPH ' c ' UNITS TO THE RIGHT, AND $f(x + c)$ SHIFTS IT ' c ' UNITS TO THE LEFT). A VERTICAL TRANSLATION OCCURS WHEN WE ADD OR SUBTRACT A CONSTANT FROM THE ENTIRE FUNCTION (E.G., $f(x) + c$ SHIFTS THE GRAPH ' c ' UNITS UP, AND $f(x) - c$ SHIFTS IT ' c ' UNITS DOWN).

DILATIONS (STRETCHES AND COMPRESSIONS)

DILATIONS AFFECT THE STEEPNESS OF A GRAPH. A VERTICAL STRETCH OCCURS WHEN WE MULTIPLY THE ENTIRE FUNCTION BY A CONSTANT GREATER THAN 1 (E.G., $c f(x)$ WHERE $c > 1$). A VERTICAL COMPRESSION OCCURS WHEN WE MULTIPLY BY A CONSTANT BETWEEN 0 AND 1. SIMILARLY, HORIZONTAL STRETCHES AND COMPRESSIONS INVOLVE MULTIPLYING THE INPUT VARIABLE BY A CONSTANT (E.G., $f(cx)$).

REFLECTIONS

REFLECTIONS FLIP A GRAPH ACROSS AN AXIS. A REFLECTION ACROSS THE X-AXIS OCCURS WHEN WE NEGATE THE ENTIRE FUNCTION (E.G., $-f(x)$). A REFLECTION ACROSS THE Y-AXIS OCCURS WHEN WE NEGATE THE INPUT VARIABLE (E.G., $f(-x)$).

COMBINING TRANSFORMATIONS

OFTEN, FUNCTIONS UNDERGO MULTIPLE TRANSFORMATIONS SIMULTANEOUSLY. THE ORDER IN WHICH THESE TRANSFORMATIONS ARE APPLIED IS CRUCIAL. TYPICALLY, HORIZONTAL TRANSFORMATIONS ARE PERFORMED FIRST, FOLLOWED BY STRETCHES/COMPRESSIONS, THEN REFLECTIONS, AND FINALLY VERTICAL TRANSFORMATIONS. MASTERING THE ORDER OF OPERATIONS FOR TRANSFORMATIONS IS A KEY OBJECTIVE OF SECONDARY MATH 3 MODULE 1.

OPERATIONS ON FUNCTIONS

JUST AS WE CAN PERFORM ARITHMETIC OPERATIONS ON NUMBERS, WE CAN ALSO COMBINE FUNCTIONS USING ADDITION, SUBTRACTION, MULTIPLICATION, AND DIVISION. THESE OPERATIONS CREATE NEW FUNCTIONS FROM EXISTING ONES, EXPANDING THE REPERTOIRE OF FUNCTIONS WE CAN WORK WITH.

ADDITION AND SUBTRACTION OF FUNCTIONS

WHEN WE ADD TWO FUNCTIONS, SAY $f(x)$ AND $g(x)$, WE CREATE A NEW FUNCTION $(f + g)(x)$ WHICH IS DEFINED AS $f(x) + g(x)$. SIMILARLY, THE DIFFERENCE OF TWO FUNCTIONS IS $(f - g)(x) = f(x) - g(x)$. THE DOMAIN OF THESE NEW FUNCTIONS IS THE INTERSECTION OF THE DOMAINS OF $f(x)$ AND $g(x)$, MEANING WE CAN ONLY PERFORM THE OPERATION FOR INPUT VALUES THAT ARE VALID FOR BOTH ORIGINAL FUNCTIONS.

MULTIPLICATION AND DIVISION OF FUNCTIONS

THE PRODUCT OF TWO FUNCTIONS IS $(f \cdot g)(x) = f(x) \cdot g(x)$, AND THEIR QUOTIENT IS $(f / g)(x) = f(x) / g(x)$. FOR THE DIVISION OPERATION, WE MUST ALSO CONSIDER THAT THE DENOMINATOR FUNCTION, $g(x)$, CANNOT BE EQUAL TO ZERO. AGAIN, THE DOMAIN OF THESE RESULTING FUNCTIONS IS RESTRICTED TO THE COMMON DOMAIN OF $f(x)$ AND $g(x)$.

FUNCTION COMPOSITION

FUNCTION COMPOSITION IS A MORE ADVANCED OPERATION WHERE WE "NEST" ONE FUNCTION INSIDE ANOTHER. THE COMPOSITION OF $f(x)$ WITH $g(x)$, DENOTED AS $(f \circ g)(x)$, MEANS WE SUBSTITUTE THE ENTIRE FUNCTION $g(x)$ INTO THE INPUT OF $f(x)$. SO, $(f \circ g)(x) = f(g(x))$. THIS PROCESS REQUIRES CAREFUL SUBSTITUTION AND ALGEBRAIC SIMPLIFICATION AND IS A SIGNIFICANT TOPIC IN SECONDARY MATH 3 MODULE 1. UNDERSTANDING THE ORDER OF COMPOSITION IS VITAL, AS $(f \circ g)(x)$ IS GENERALLY NOT THE SAME AS $(g \circ f)(x)$.

INVERSE FUNCTIONS

AN INVERSE FUNCTION "UNDOES" THE ACTION OF THE ORIGINAL FUNCTION. IF A FUNCTION f TAKES AN INPUT ' x ' TO AN OUTPUT ' y ', THEN ITS INVERSE FUNCTION, DENOTED AS $f^{-1}(x)$, TAKES THE OUTPUT ' y ' BACK TO THE ORIGINAL INPUT ' x '. THIS CONCEPT IS CRUCIAL FOR SOLVING EQUATIONS AND UNDERSTANDING RECIPROCAL RELATIONSHIPS IN MATHEMATICS.

FINDING THE INVERSE FUNCTION

TO FIND THE INVERSE OF A FUNCTION, WE TYPICALLY FOLLOW A THREE-STEP PROCESS. FIRST, WE REPLACE $f(x)$ WITH ' y '. SECOND, WE SWAP ' x ' AND ' y ' IN THE EQUATION. THIRD, WE SOLVE THE NEW EQUATION FOR ' y ', AND THIS ' y ' WILL BE OUR INVERSE FUNCTION $f^{-1}(x)$. THIS PROCESS IS STRAIGHTFORWARD FOR MANY TYPES OF FUNCTIONS, BUT IT REQUIRES THAT THE ORIGINAL FUNCTION IS ONE-TO-ONE TO HAVE A UNIQUE INVERSE.

VERIFYING INVERSES

WE CAN VERIFY IF TWO FUNCTIONS ARE INDEED INVERSES OF EACH OTHER BY CHECKING IF THEIR COMPOSITION RESULTS IN THE IDENTITY FUNCTION, WHICH IS SIMPLY $f(g(x)) = x$ AND $g(f(x)) = x$. IF BOTH OF THESE CONDITIONS ARE MET, THEN $f^{-1}(x)$ IS THE INVERSE OF $f(x)$. THIS VERIFICATION STEP IS ESSENTIAL TO CONFIRM THAT WE HAVE CORRECTLY FOUND THE INVERSE.

DOMAIN AND RANGE OF INVERSE FUNCTIONS

AN INTERESTING PROPERTY OF INVERSE FUNCTIONS IS THAT THE DOMAIN OF THE ORIGINAL FUNCTION BECOMES THE RANGE OF ITS INVERSE, AND THE RANGE OF THE ORIGINAL FUNCTION BECOMES THE DOMAIN OF ITS INVERSE. THIS RELATIONSHIP IS A DIRECT CONSEQUENCE OF SWAPPING THE x AND y VALUES DURING THE INVERSE-FINDING PROCESS AND IS A KEY CONCEPT EXPLORED IN SECONDARY MATH 3 MODULE 1.

FREQUENTLY ASKED QUESTIONS (FAQ)

Q: WHAT IS THE PRIMARY FOCUS OF SECONDARY MATH 3 MODULE 1?

A: THE PRIMARY FOCUS OF SECONDARY MATH 3 MODULE 1 IS THE IN-DEPTH STUDY OF FUNCTIONS, INCLUDING THEIR DEFINITION, NOTATION, DOMAIN AND RANGE, GRAPHICAL REPRESENTATION, TRANSFORMATIONS, OPERATIONS, AND THE CONCEPT OF INVERSE FUNCTIONS.

Q: WHY IS UNDERSTANDING THE DOMAIN AND RANGE OF A FUNCTION IMPORTANT?

A: UNDERSTANDING THE DOMAIN AND RANGE IS CRUCIAL BECAUSE THEY DEFINE THE SET OF VALID INPUTS AND OUTPUTS FOR A FUNCTION, WHICH IMPACTS ITS BEHAVIOR, ITS GRAPH, AND ITS APPLICABILITY IN REAL-WORLD SCENARIOS. IT HELPS IDENTIFY ANY RESTRICTIONS OR LIMITATIONS ON THE FUNCTION.

Q: WHAT IS THE DIFFERENCE BETWEEN A RELATION AND A FUNCTION?

A: A RELATION IS ANY SET OF ORDERED PAIRS, WHILE A FUNCTION IS A SPECIFIC TYPE OF RELATION WHERE EACH INPUT HAS EXACTLY ONE OUTPUT. THE VERTICAL LINE TEST IS A GRAPHICAL METHOD TO DISTINGUISH BETWEEN THEM.

Q: CAN YOU EXPLAIN FUNCTION COMPOSITION IN SIMPLER TERMS?

A: FUNCTION COMPOSITION IS LIKE A CHAIN REACTION FOR FUNCTIONS. YOU TAKE THE OUTPUT OF ONE FUNCTION AND USE IT AS THE INPUT FOR ANOTHER FUNCTION. FOR EXAMPLE, IF YOU HAVE FUNCTION A AND FUNCTION B, COMPOSING THEM MEANS PLUGGING THE RESULTS OF FUNCTION B INTO FUNCTION A.

Q: HOW DO TRANSFORMATIONS AFFECT THE GRAPH OF A FUNCTION?

A: TRANSFORMATIONS LIKE SHIFTS, STRETCHES, COMPRESSIONS, AND REFLECTIONS ALTER THE POSITION, SIZE, AND ORIENTATION OF A FUNCTION'S GRAPH. FOR INSTANCE, ADDING A NUMBER TO THE INPUT SHIFTS THE GRAPH HORIZONTALLY, WHILE MULTIPLYING THE ENTIRE FUNCTION BY A NUMBER CAN STRETCH OR COMPRESS IT VERTICALLY.

Q: WHAT DOES IT MEAN FOR A FUNCTION TO HAVE AN INVERSE?

A: A FUNCTION HAS AN INVERSE IF IT'S A ONE-TO-ONE FUNCTION, MEANING EACH OUTPUT CORRESPONDS TO A UNIQUE INPUT. THE INVERSE FUNCTION EFFECTIVELY REVERSES THE PROCESS OF THE ORIGINAL FUNCTION, TAKING OUTPUTS BACK TO THEIR ORIGINAL INPUTS.

Q: HOW DO I FIND THE DOMAIN AND RANGE OF A FUNCTION LIKE A SQUARE ROOT FUNCTION?

A: FOR A SQUARE ROOT FUNCTION, THE DOMAIN IS RESTRICTED BECAUSE THE VALUE INSIDE THE SQUARE ROOT MUST BE NON-NEGATIVE. THE RANGE WILL ALSO BE RESTRICTED DEPENDING ON THE TRANSFORMATIONS APPLIED TO THE SQUARE ROOT. FOR EXAMPLE, FOR $f(x) = \sqrt{x}$, THE DOMAIN IS $x \geq 0$ AND THE RANGE IS $y \geq 0$.

Q: WHAT ARE THE COMMON TYPES OF FUNCTIONS STUDIED IN THIS MODULE?

A: THIS MODULE TYPICALLY COVERS LINEAR FUNCTIONS, QUADRATIC FUNCTIONS, EXPONENTIAL FUNCTIONS, AND LOGARITHMIC FUNCTIONS, AMONG OTHERS, EXPLORING THEIR UNIQUE PROPERTIES AND APPLICATIONS.
