- "Numbers rule the universe." – Pythagoras
- "The only way to learn mathematics is to do mathematics." – Paul Halmos
- "There are more things in heaven and earth than are dreamt of in your philosophy, Horatio, but most of them are integers." – A humorous twist on Shakespeare, often attributed to mathematicians.

These quotes, while short, carry significant weight. Poincaré's observation speaks to the power of abstraction and generalization in mathematics, a cornerstone of its universality. Pythagoras, centuries ago, hinted at the fundamental role of numbers in describing reality. Halmos's practical advice is a testament to the active nature of mathematical learning. And the playful Shakespearean adaptation reveals the inherent wit that can exist within the mathematical community.

Quotes from Scientists and Philosophers

Mathematics is not confined to the realm of pure mathematicians; its principles and methods are foundational to science and philosophy. Consequently, many prominent figures in these fields have offered insightful, short quotes that illuminate the connection between mathematics and their respective disciplines. These perspectives often highlight mathematics as a language of the universe or a tool for understanding its deepest mysteries.
